

ATTENTION: All classes begin at 9 a.m. and are in the second floor classroom of the Salvage Warehouse at 908 23rd Street, Galveston

MARCH 6 – SUSTAINABILITY AND HISTORIC PRESERVATION

“The greenest building is one that is already built” is a popular statement among preservationists when discussing sustainability and being GREEN. The U.S. Green Building Council developed the LEED (Leadership in Energy and Environmental Design) rating system as a way to evaluate how sustainable a building is. This class will explain the ways this rating system and sustainable technologies can be incorporated into historic buildings.

MARCH 20 – MASONRY MAINTENANCE

Historic property owners face a number of masonry issues including general maintenance, tuck pointing, brick replacement, loose stones, and cleaning. If done incorrectly, a minor repair can later become costly as it can affect the rest of the surrounding brick or stone. Jonathan Zumeta will show the class ways to properly care for their masonry and avoid any costly errors.

APRIL 10 – LANDSCAPING FOR THE HISTORIC GALVESTON CLIMATE

Due to our temperate climate and ample sunlight Galveston has fostered ample gardens dating back to the earliest houses on the Island. Matt Hannon will discuss the types of plants that would have been in these early gardens, what plants should or should not be planted in our climate, and information on sustainable plants that do not require heavy watering and maintenance.

APRIL 17 – AIR CONDITIONING AND HEATING HISTORIC BUILDINGS

Historic building owners have many decisions to make when installing air conditioning and heating systems, especially if the property has never had these systems. This class will discuss the many options available when bringing these modern amenities into a historic building. Join us to learn how to be sensitive to the building, avoid problems, and hopefully also save money on these utilities.

APRIL 24 – HANDS-ON WEATHERIZING WINDOWS AND DOORS

Hoping to save money on utility bills in your historic building? Join us to learn cost effective weatherizing strategies to help you save money and also preserve the historic fabric of your building. Instructors will use building materials from GHF’s Architectural Salvage Warehouse as learning tools to show you exactly what can be done in a series of demonstrations showing techniques for weather-stripping, repairing wood windows, and decreasing costly energy leaks.

Galveston Historical Foundation invites you to participate in our historic preservation Demonstration Classes and Presentation Series.

The cost for all five sessions is \$45 for GHF members and \$55 for non-members. Individual sessions are \$10 each for members and \$12 for non-members. Space is limited, to guarantee a seat, pre-registration is strongly suggested. Proceeds from the series go toward increasing the books and research materials in the Preservation Resource Center. Fees are not refundable.

For information, call (409) 765-3424. To register, please complete the information below and check the box by the session(s) you would like to attend. Return to:
