The Old Green

- In the **summer**, run the blades **downward** to create a breeze.
- In the **winter**, find the switch that reverses the motor to run the fan in the opposite direction, creating a gentle **updraft**.
- **Raise your thermostat** by 2 degrees and use the ceiling fan and you can reduce air condition costs by up to 14% over the season.
- **Turn off** the ceiling fan when leaving a room.

The New Green

- **EnergyStar** ceiling fan/light combination units are about 50% more efficient than conventional units and can save you more than \$15/yr on your utility bill.
- Aside from EnergyStar, consider the following when purchasing a new fan:
 - Choosing the right **size**
 - Choosing the appropriate **mounting system**
 - Ceiling fans rated for **wet/damp locations**
